

# CenteringParenting Data Collection Present & Future

January 8, 2020

Tanya Munroe

Senior Director, Quality & Special Initiatives

[tmunroe@centeringhealthcare.org](mailto:tmunroe@centeringhealthcare.org)

## History

- CenteringCounts: CenteringPregnancy only in Excel version 2013
- With feedback from sites and Advisory Group, built CenteringParenting functions in online system 2018
- Try to resist recreating EMR: outcomes must be Centering-related and comparable to traditional care

## Where we are

- Demo of current options
- [help.centeringcounts.org](http://help.centeringcounts.org)
- CenteringConnects boards for CenteringParenting & CenteringCounts

## Considerations

- What measures are meaningful to internal and external partners?
- What measures show true change in family health?
- Intention to more deeply understand care experience for staff and not-first time parents

## Where we are going in 2020

- Screening for maternal & “other caregiver” **mental health** (PPMD) occurred (PHQ2, PHQ9, EDPS)
- Mother or other caregiver diagnosed & referred for mental health services as indicated by results (PPMD)
- Screening for **child development** occurred using an established tool (i.e. ASQ, PEDS, etc.)
- Child referred for services as indicated by developmental screen results
- Screening for **parental competencies** occurred + score
- Screening for **parental stress** occurred + score
- Screening for **positive parenting behaviors** occurred + score
- Tools: Parenting Sense of Competence screen (PSOC), Parenting Stress Index (PSI), SEEK (Safe Environment for Every Kid)
- Goals & baselines for all
